Superintendent's Corner

Hello folks. We are halfway through the year and it's been a good one. I love seeing all of you out here enjoying it. It hasn't been too hot yet so that's good.

We had our Junior Camp this last week and it was a success. Having the little ones out here make me smile. They are so full of energy and willing to learn. They are the future of this great game we love, so encourage them anytime you get the chance.

This is the time of year that we have to water greens during the day while you are golfing. We don't want to be out there either, trust me. We aren't actually watering the green, we are 'cooling' them off. Try to be courteous when playing a hole the guys are watering on, we will do the same. The greens tend to slow down a little this time of year because they are more moist. We will roll as often as we can to try and maintain speeds.

I have been spraying a chemical on some of greens to suppress the Bermuda grass. It will turn the Bermuda grass white. Don't be alarmed, the green isn't dying. Yet!! I will be applying it every ten days or so through the summer. Maybe it will help lessen the problem we have with Bermuda on some of the greens.

I think we have the pump station issues ironed out and we can stop getting so many leaks. We still have some to fix and we will always get a leak here or there, even with the pumps working properly. Hang with us through this little hiccup, we will get it ironed out and move on down the road.

Daniel Mills, GCS

TIPS FROM THE PROS

Do you swing the club or hit the ball?

Most players we teach hit the ball and very few swing the club. The difference is where the net force of the swing is located. If you are guilty of hitting your irons fat, pushing the ball off line or making big divots that start behind the ball, LISTEN UP!

Many players attempt to move the club in the downswing and impact by driving their legs forward and hitting down on the ball because it feel like they can hit it longer. They are actually losing distance because the net fore of the swing is located in their body not the clubhead.

If we can learn to apply the force to the clubhead which is then transferred into the ball, we will see the ball fly higher and longer PLUS the swing will feel like it requires less effort.

A great drill to practice putting the force of your swing into the clubhead is to take your stance with your feet completely together, begin making swings without falling over. Once you have gradually built up to a full swing without losing your balance, start hitting some balls. When done correctly, you should be able to make a full swing and clip the ball off the top of the turf, make a SMALL divot and not fall over.

If you need help with your game, call us at 255.7706.
